PROFILE

Six years in IT, I've always asked whether things can be done better. I've seen what the right tools, used properly, can achieve: less friction, better data, better decisions, and more meaningful work. That curiosity took me from day-to-day support into service design, platform migrations, and the complete rethinking of processes that had not been questioned. I am looking for ITSM, service design, or IT operations roles, including Team Lead and Process Owner positions.

WORK EXPERIENCE

IT Support & Platform Specialist

DeepL SE — Cologne, Germany | *May 2023 – Present*

- **Redesigned** internal **service portals** used across the company — applied **ITSM** and **behavioural psychology** research to replace legacy ticket categories with intent-based request forms for IT Support, and used **AI-assisted analysis** of ticket volumes and categories to drive continuous improvement for other internal support functions.
- Administered DeepL's **Atlassian platform** across 150+ internal projects, building multiple automation and workflows that supported approvals, compliance processes, and service delivery for teams across the organization.
- Played a leading role the **Asana-to-Jira** migration for 7 teams (~80 users) over 3 months — from **stakeholder consultation** and tool evaluation through data migration and **post-migration training**, successfully moving 6 of 7 teams.
- Maintained **4.9/5 CSAT** across 2,000+ tickets resolved with a 6-hour average first response, **supporting a 1,200+** employee environment via Jira and the company-wide Slack support channel.
- Investigated **cross-platform incidents** (identity, email, cloud, Atlassian) with **root cause analysis**, coordinating remediation across infrastructure and platform teams.
- Supported **team growth and operational efficiency** by contributing to 10+ hiring interviews for IT Support and Atlassian Admin roles, and managing **vendor relationships** alongside budget planning input.
- Owned the **design** of a centralized software asset inventory in **Jira Assets (CMDB)**, defining the asset model, evaluating implementation approaches, and working with **cross-functional stakeholders** to support software **governance** and **procurement** decisions.

IT Support Specialist

Morningstar — Frankfurt am Main, Germany | *May 2021 – April 2023*

- Owned regional IT support for **six offices across Germany, Switzerland, Sweden and Denmark** as the POC, and created the first **knowledge base documenting** setup and procedures for the regional offices.
- **Coordinated** directly between local users and global infrastructure teams — **escalating regional issues upstream** and managing **infrastructure-driven changes** back to local offices.
- **Led local diagnosis** during incidents affecting the regional offices, working with **global infrastructure** teams on **root cause analysis** and remediation.

- Participated in the Citrix-to-AWS migration as a pre-rollout tester, then owned post-rollout support for Frankfurt and London — including training ~100 users in sessions built around early ticket patterns.
- Executed hardware and software **asset lifecycle** for ~500 regional assets — including procurement, audits, device rebuilds, and end-of-life handling.

IT Support Specialist

Cognizant SoftVision — Bucharest, Romania | *October 2019 – April 2021*

- Delivered on-site IT support for ~70 developers across two Bucharest offices, maintaining **ticket resolution above 90%** within SLA through Jira Service Management.
- Managed **user provisioning** and access control through **Active Directory** — including onboarding, offboarding, and ongoing permission changes.
- Created and maintained **technical documentation** and support procedures in Confluence — **standardizing recurring fixes** and reducing dependency on individual team members.

IT Help Desk Agent

TSG Romania — Bucharest, Romania | *November 2018 – October 2019*

- Delivered remote technical support for petrol stations across Romania and Moldova, **resolving approximately 80% of incidents at first contact**.
- Supported a multi-system environment including POS terminals, pump controllers, station networking, and office computers — diagnosing issues over phone and remote tools.
- Escalated complex incidents to L2 teams and worked with on-site technicians to coordinate remediation.

TECHNICAL SKILLS

Identity & Access: Active Directory, Google Workspace, Keycloak (SSO)

Microsoft ecosystem: Entra ID (formerly Azure AD), Microsoft 365 Admin Center, Intune, Exchange Online

ITSM & Process: ITIL 4, ITSM Process Design, Continuous Improvement

ITSM Tools: Jira (Service Management, Administration, Automation, Assets - CMDB), Zendesk, ServiceNow

Collaboration & Productivity: Slack, Zoom, Confluence

Infrastructure & Systems: AWS, VMware, JAMF, Git/GitLab, Windows Server, macOS, Linux

Networking: TCP/IP, DNS, DHCP, VPN, Wi-Fi troubleshooting

PROJECTS

Claere (claere.com) — Conceptualized and shipped a full-stack platform for long-form storytelling, built around witnessing rather than engagement metrics. Defined product vision, UX, and privacy architecture independently.
